Therapeutic Research: Where & How do Patents Fit In?

Dr Toby Thompson & Dr Brittany Howard

FB Rice Patent Attorneys

Do you know when an invention is patentable? Who should be listed as inventors on your patent? How is patenting of pharmaceutical research different from other patents?

The Department of Pharmacology & Therapeutics and the Therapeutic Technologies Research Initiative (TTRI) invite you to this special seminar with two guest speakers from FB Rice.

Toby is a qualified European and UK Patent Attorney specialising in pharmaceuticals and organic chemistry. His areas of expertise include new biologically active compounds, pharmaceutical compositions, new medical uses for existing medicines, and industrial chemical processes. A focus for Toby is providing commercially relevant advice to clients regarding their own intellectual property and third party patents.

Brittany is a Trainee Attorney in the Melbourne Chemistry team specialising in organic and medicinal chemistry. Her areas of expertise include pharmaceuticals, formulations and compositions, synthetic organic chemistry, and material and polymer chemistry.
